PROFILE

I've spent 11 years in UX. For the last five, I've been the founding designer and then UX lead on a white-label **US health-insurance** platform used by **payers, employers, and members**, from its first screen to production. Before that, I brought nine Dubai Municipality apps into one, in Arabic and English, and designed Jet Airways' consumer apps. I also lead my team's use of **AI in design delivery**, with no member data in the loop.

DOMAIN

Open & passive enrollment · life-event coverage changes · eligibility rules · eligibility data files from employers · benefits administration · privacy-aware design (HIPAA) · accessibility (WCAG)

EXPERIENCE

Mphasis · White-label US health-insurance platform

Founding UX Designer, now
UX Lead
Official title: Technical
Delivery Lead
2021 – Present

The platform's first designer · led **4 designers** (hired 2) · UX sign-off on client releases · **3 live clients**

- **From 9 steps to 5.** Redesigned open enrollment so members say who's covered once, instead of again for every coverage, and it's live for all 3 clients. The new order didn't match the backend's data model, so I agreed a phased backend change with engineering.
- **Under a day to theme a new client** or sales demo, down from weeks, using three tiers of design tokens (insurer, employer, and member) behind a **120+ component** system for web, mobile web, iOS, and Android.
- **3 or 4 days from Jira story to engineering-ready screen**, down from 1 or 2 weeks, working with business analysts (team-observed), after I rewrote the design system as skill files that AI tools can follow. Self-initiated, used by my designers, and adopted by the wider org's UAT team.
- Set up how design runs on the platform: workshops with business analysts before design, UX validation on every build, a designer's review of every AI-generated screen, and an agreement with the tech lead that each component state is built once.

Blinkwiser

Independent AI product work
Lab, alongside Mphasis
Jul 2026 – Present

Carousel Builder, live with users: turns a topic into a LinkedIn carousel, checks every figure against a source, and lets you undo any edit. Rebuilt in two months by directing AI coding agents. **Video Course Builder** in beta.

Mphasis · Dubai Municipality

Lead UX Designer, onsite in Dubai
2020 – 2021

Led the design of one app that replaced **nine separate Municipality apps**: the five-tab structure, the dashboard, and service groups built with stakeholders in a card sorting workshop. Arabic set up as a right-to-left template, all within the limits of a low-code platform. It launched while I was there.

Mphasis · Jet Airways

UX Designer, consumer apps
2015 – 2019

Web, iOS, Android, and Apple Watch apps on a shared component library, all in production until the airline closed in 2019.

IBN AL QYM · ITAD · Wahab Studio

UX, UI & graphic design

2007 – 2015

Agency UI for client web platforms in Doha; earlier, web mockups, brand and print design.

SKILLS

Design

Design systems & tokens, AI-readable design systems, white-label theming, information architecture, interaction design, usability testing, bilingual / RTL

AI-assisted delivery

Design-to-code: Claude Code, GitHub Copilot in VS Code, Google Antigravity, Figma MCP · Agent frameworks: LangChain / LangGraph · Prototyping: Lovable

Design tools

Figma, FigJam, Storybook, Zeplin, Maze, Miro, Adobe XD

Technical

React / Next.js, TypeScript, HTML / CSS, design tokens

EDUCATION

IIT Roorkee

Mahatma Gandhi University

DeepLearning.AI

PG Certificate, Forward Deployed AI Engineering · 2026, in progress

Bachelor of Business Administration · Meghalaya, 2011 – 2013

Agentic AI · AI Agents in LangGraph
